

C O N C R E T E

BY BAYLEAF

To our valued customers,

At **Concrete by Bayleaf** we advise our customers to avoid walking on our coloured and plain concrete products for up to 36 hours.

Exposed aggregate cannot be walked on until it has been sealed.

Here are some interesting facts about our Concrete.

- Our concrete is sourced and tested from the most renowned suppliers in Australia, ensuring it will stand the test of time!
- Whilst you can walk on our concrete often the next day, concrete actually takes 30 days to fully cure
- A minimum of 7 days is required for any vehicle traffic in summer and 10 days in winter.
- Cracking in concrete is somewhat controlled by "Control Joints". These are the grooves we make in your concrete, These cuts are designed to persuade the cracking and in turn prevent cracking to the general paved surface.

We want you to have the most eye catching, and best Concrete finish in the entire street, Maybe the City!

Once you have your **Concrete by Bayleaf** you can follow these simple practices to keep it looking its best.

Concrete by Bayleaf Care:

- Sweep concrete fortnightly.
- Pressure wash concrete driveway every two months.
- Avoid driving on surface with heavy mud or dirty tyres.
- Avoid oils from machinery, cars or maintenance equipment from direct contact to surface.
- When using paints or chemicals ensure drop sheets or protective trays are used.
- All sealed driveways require sealing every 5 years.

For any further advice please feel free to contact Concrete by Bayleaf any time.

Kind regards,
Anton Bialylew
